1 Introduction

1.1 Purpose of this Document

The purpose of this test case is the demonstration of the *MAT_224.GYS and *MAT_224 features in LS-DYNA® . The reliability and consistency of LS-DYNA® as a finite element solver for this test case is evaluated by performing analyses on different cpu architecture platforms.

3 Test Case Specification

3.1 Test Case Purpose

The purpose of Test Case ID AWG-ERIF-15 is to verify that *MAT_224.GYS and *MAT_224 give the same results for symmetric materials (tensile yield=compressive yield). A total of ten subcases as described in Section 3.2 make up the test case.

3.2 Test Case Description

This test case contains three sets of models (Set 1, Set 2, and Set 3) each with subcases for evaluating and comparing various features in *MAT_224 and *MAT_224_GYS. Set 1 (Figure 1) compares the compressive and shear yield stress as a function of plastic strain (IFLAG=0) and as a function of effective plastic strain (IFLAG=1) for the five load conditions bi-axial tension, uni-axial tension, pure shear, uni-axial compression, and bi-axial compression. Set 2 (Figure 2) compares the four loading patterns step-down, step-up, confined tension, and uni-axial tension for two different fractions of plastic work converted into heat (BETA equal and not equal to 1). Set 3 (Figure 3) contains seven verification test cases with a different yield ratios (compressive yield/tensile yield).

Figure 1: Elements, loads, and materials for Set 1

Figure 2: Elements, loads, and materials for Set 2

Figure 3: Figure 3: Elements, loads, and materials for Set 3

3.3 Model Description

The models consists of ten subcases with three different sets of single elements using MAT_224 or MAT_224_GYS for various loads. The models were used as verification test cases for the implementation of MAT_224_GYS. The material definitions and their parameters can be found in the input deck. A summary of the sub test cases can be found in Table 3.

4 Test Specifications

4.1 Test Case Targets

Table 4 displays the test case targets. The test case targets specify values or a series of values taken from the finite element analysis solution of the test case and they are used in a comparison of analysis results on different cpu architectures. They are chosen in a way that they are representative of the numerical model.

Table 4: Test Case targets for Test Case ID AWG-ERIF-15

Test case targets are used to evaluate the cross cpu architecture consistency (see section 4.2).

4.2 Pass/Fail Criteria

These are the Pass/Fail criteria used for the cross cpu architecture consistency test of the Test Case ID AWG-ERIF-15.

The sub test case passes if the test case target data falls within the corridor bounds. Otherwise the test fails.

The test case corridors are upper and lower bounds for the test case targets. They were defined based on the test target data obtained with LS-DYNA® R9.1 Revision 113467 binaries by the following process:

- For a specific test case target, interpolate the data from different platform and executable (R9.1 Revision 113467) combinations, so that the time domain is the same.
- Calculate the upper and lower bounds by:

$$bound_{up}(i) = max(i) + 0.2 \times [max(i) - min(i)] + 0.05 \times peak$$

$$bound_{low}(i) = min(i) - 0.2 \times [max(i) - min(i)] - 0.05 \times peak$$

where $max(i)$, $min(i)$ are the maximum and minimum values at the i_{th} time step across all platforms and executable (R9.1 Revision 113467) combinations the test case was calculated with, $peak$ is the maximum absolute y value across the whole time domain, $bound_{up}(i)$ and $bound_{low}(i)$ are the upper and lower bounds for the i_{th} time step.

5.2 Results Summary

Table 7 contains the results of the Test Case ID AWG-ERIF-15 completed with all combinations of software and hardware defined in section 5.1.

Details on the test results can be found in the section 5.3.

The table 7 cross cpu architecture consistency summary is:

- **PASS** - Pass criteria in section 4.2 is attained.
- **FAILED** - Pass criteria in section 4.2 is not attained.
- **ERROR** - sub test case terminates due to error.
- **N/A** - sub test case was not calculated.

5.3 Result Details

The following subsections contain detailed results for the Test Case ID AWG-ERIF-15 for LS-DYNA® R9 Revision 118235.

For each sub test case defined in section 3.3 there is a graph displaying the time history of the result target defined in section 4.1 for the platform and software version combinations defined in section 5.1.

The title of the graph states the test case ID and the name of input deck. The legend contains the result file name, output, platform, executable and number of cpu's separated by comma. A minus sign before the number of cpu's refers to the compatibility option for SMP calculations (see [1] for details on this option).

Example for title and legend:

Title:

'AWG_ERIF_TEST_CASE_15: MAT224_GYS_QA_SET1_IFLAG0.k' states the test case ID 15 and name of the input deck for sub test case 1.

Legend:

'elout_effsg_1_1_1,mars,ls971.118235.R9,4' states that the graph shows the Von Mises Stress (effective stress) of element ID 1 derived from the 'elout' output file for an input deck which was calculated on the 'mars' platform with a LS-DYNA® R9 Revision 118235 binary (SMP, single precision) on four processors.
